A JOURNAL OF NEUROLOGY

Cover image: Flow diagram showing the development of myelinating co-cultures using human induced pluripotent stem cell-derived sensory neurons to model human neuropathies and provide insights into the cellular and molecular specialization of axoglial signalling and the pathogenic effects of ganglioside antibodies. From Clark *et al.* Co-cultures with stem cell-derived human sensory neurons reveal regulators of peripheral myelination. Pp. 898–913.
