137 Effect of Platelet-Rich Plasma Injection vs Sham Injection on Tendon Dysfunction in Patients With Chronic Midportion Achilles Tendinopathy: A Randomized Clinical Trial

RS Kearney and Coauthors
for the ATM Trial Collaborators

This randomized clinical trial compares the efficacy of a single injection of intratendinous platelet-rich plasma vs injection with a subcutaneous dry needle (SHAM) from baseline until 6-month follow-up in adult patients with chronic midportion Achilles tendinopathy.

JAMA CLINICAL CHALLENGE

181 Postoperative Skin Lesion After Knee Replacement

CJ Fang, BW Lester, and BL Hollenbeck

A 71-year-old woman presented 8 weeks after total knee arthroplasty with a 1-week history of scattered tense, pruritic bullae around the incision site but no surrounding erythema or edema. She was afebrile and had no known allergies; the pruritus and bullae remained unchanged after a course of oral cephalexin and prednisone. What is the diagnosis and what would you do next?

JAMA PATIENT PAGE

196 Unhealthy Alcohol Use

AK Patel and AA Balasanova

This JAMA Patient Page defines risky alcohol use and alcohol use disorder, and describes their adverse health effects.
