*Desmond A. Brown, Benjamin T. Himes, Brittny T. Major, Benjamin F. Mundell, Ravi Kumar, Bruce Kall, Fredric B. Meyer, Michael J. Link, Bruce E. Pollock, John D. Atkinson, Jamie J. Van Gompel, W. Richard Marsh, Giuseppe Lanzino, Mohamad Bydon, and Ian F. Parney* 🇺🇸 🇨🇦 🇩🇪  
Rates of complications were low, and management of cases by chief residents in a semiautonomous manner did not negatively impact surgical outcomes.
- 25 **Clinical Manifestations and Outcomes of Fluoroquinolone-Related Acute Interstitial Nephritis**  
*Saira Farid, Maryam Mahmood, Omar M. Abu Saleh, Abdurrahman Hamadah, Samih H. Nasr, Zerelda Esquer Garrigos, Nelson Leung, and M. Rizwan Sohail* 🇺🇸 🇨🇦 🇩🇪

## Cover Image

The composite cover image highlights 3 salient themes: the wide-ranging effects of human biomedical research and discovery in driving progress in understanding and treating human disease (symbolized, on the left, by a neuron and its ramifying dendrites and axons); state-of-the-art investigation in evaluating human disease (symbolized, in the middle, by a positron emission tomographic image of the brain); and the indispensability of teamwork and the coalescence of expertise in providing the best possible care for patients (symbolized, on the right, by a collaborating surgical/interventional team).
