

**Cover image:** In Alzheimer's disease, amyloid- $\beta$  oligomers suppress Wnt/ $\beta$ -catenin signalling in the brain endothelium, thus reducing functional expression of endothelial proteins and compromising blood-brain barrier. From Wang et al. Activation of Wnt/ $\beta$ -catenin pathway mitigates blood-brain barrier dysfunction in Alzheimer's disease. Pp. 4474–88.

Artwork by Yixun Su and Qi Wang.
