

Cover image: The function of the glymphatic system relies on perivascular astrocyte aquaporin-4 expression. Loss of aquaporin-4 subcellular relocalization to perivascular astrocytic endfeet impairs glymphatic clearance, which accelerates amyloid- β accumulation and cognitive decline. From Salman et al. Emerging roles for dynamic aquaporin-4 subcellular relocalization in CNS water homeostasis. Pp. 64–75.

Illustration by Ella Maru Studio.
