

Cover image: The White Rabbit from Lewis Carroll's world – forever racing against time – captures the urgency of decision-making in acute stroke care. In this reinterpretation, his watch reflects not just time, but the brain's fate. Thanks to new AI-based tools, fast and personalized predictions of stroke outcomes are now within reach, with the potential to guide critical treatment decisions when every second counts. Image built from OpenAI's model DALL-E outputs, manually merged and refined. *Brain*. 2025; 148(7):2348-2360.
