

BRAIN

A JOURNAL OF NEUROLOGY

Cover image: Progression in the state of consciousness was correlated with re-emergence of frontoparietal connectivity in alpha band network topographs of vegetative (top left), minimally conscious minus (top right) and minimally conscious plus (bottom left) patients, shown alongside healthy controls (bottom right). From Chennu *et al.* Brain networks predict metabolism, diagnosis and prognosis at the bedside in disorders of consciousness. Pp. 2120–2132.
