Active DNA demethylation, via TET1 and TDG, is an epigenetic safeguard that can prevent colon cancer through suppression of the inflammatory/interferon response. The CpG island methylator phenotype is characterized by concerted low TET1 and high DNMT1 expression.

Inflammatory Bowel Disease

937 **Injectable, Drug-Eluting Nanocrystals Prevent Fibrosis and Stricture Formation In Vivo**

953 **Proteome-Wide Mendelian Randomization Identifies Causal Links Between Blood Proteins and Acute Pancreatitis**

J. Bourgault, E. Abner, H. D. Manikpurage, N. Pujol-Gualdo, T. Laisk, Estonian Biobank Research Team, É. Gobeil, E. Gagnon, A. Girard, P. L. Mitchell, S. Thériault, T. Esko, P. Mathieu, and B. J. Arsenault

This study identified 2 possible novel susceptibility loci for acute pancreatitis and 68 blood proteins that may causally be associated with the disease and also identified potential drug targets for acute pancreatitis.

Hepatobiliary

966 **PNPLA3 Genotype and Diabetes Identify Patients With Nonalcoholic Fatty Liver Disease at High Risk of Incident Cirrhosis**

V. L. Chen, A. Oliveri, M. J. Miller, K. Wijarnpreecha, X. Du, Y. Chen, K. C. Cushing, A. S. Lok, and E. K. Speliotes

A common mutation in the *PNPLA3* gene may help us identify a group of patients with nonalcoholic fatty liver disease at highest risk of developing advanced liver disease (cirrhosis).

978 **Increasing Pancreatic Cancer Incidence in Young Women in the United States: A Population-Based Time-Trend Analysis, 2001–2018**

Using a U.S. nationwide database (covering $\approx 64.5\%$ of the U.S. population), we show a rapidly increasing incidence of pancreatic cancer among younger women when compared with counterpart men.

990 **N6-Methyladenosine-Mediated Up-Regulation of FZD10 Regulates Liver Cancer Stem Cells' Properties and Lenvatinib Resistance Through WNT/ β -Catenin and Hippo Signaling Pathways**

J. Wang, H. Yu, W. Dong, C. Zhang, M. Hu, W. Ma, X. Jiang, H. Li, P. Yang, and D. Xiang

Elevated FZD10 expression promotes liver cancer stem cell expansion and lenvatinib resistance, indicating that FZD10 expression is a novel prognostic biomarker and therapeutic target for human hepatocellular carcinoma.
