Table of Contents

June 2018

Volume 93

Number 6

The July online issue of *Proceedings* will be available by Monday, July 2. Sign up for an alert to the online Table of Contents at www.mayoclinicproceedings.org

Editorials

- 673 Prenatal Regeneration in Clinical Practice
 Scott A. Waldman
- Obesity, Central Adiposity, and Fitness: Understanding the Obesity Paradox in the Context of Other Cardiometabolic Parameters

 Ambarish Pandey, Kershaw V. Patel, and Carl J. Lavie
- 679 The Death D-Iying Vitamin
 Michael F. Holick
- 682 Grappling With Suicide Risk
 M. Elizabeth Sublette

Commentary

Gender and Graduate Medical Education: Is Obstetrics and Gynecology a Justifiable Outlier?

Timothy R. Long, Katherine W. Arendt, Beth A. Elliott, and Steven H. Rose

Perspectives and Controversies

Medical Cannabis for Obstructive Sleep Apnea: Premature and Potentially Harmful Bhanu Prakash Kolla, Meghna P. Mansukhani, Eric J. Olson, Erik K. St. Louis, Michael H. Silber, and Timothy I. Morgenthaler

Original Articles

693 Fetoscopic Therapy for Severe Pulmonary Hypoplasia in Congenital Diaphragmatic Hernia: A First in Prenatal Regenerative Medicine at Mayo Clinic

Rodrigo Ruano, Denise B. Klinkner, Karthik Balakrishnan, Victoria A. Novoa y Novoa, Norman Davies, Dean D. Potter, William A. Carey, Christopher E. Colby, Amy B. Kolbe, Katherine W. Arendt, Leal Segura, Hans P. Sviggum, Maureen A. Lemens, Abimbola Famuyide, and Andre Terzic

The success of the first fetoscopic therapy for congenital diaphragmatic hemia reveals its feasibility and safety, with signs of benefit documented by fetal lung growth and reversal of severe pulmonary hypoplasia.

Exercise Capacity and the Obesity Paradox in Heart Failure: The FIT (Henry Ford Exercise Testing) Project

Paul A. McAuley, Steven J. Keteyian, Clinton A. Brawner, Zeina A. Dardari, Mahmoud Al Rifai, Jonathan K. Ehrman, Mouaz H. Al-Mallah, Seamus P. Whelton, and Michael J. Blaha
In this biracial sample of patients with heart failure, an obesity paradox was observed only in those with lower exercise capacity.

Overweight Without Central Obesity, Cardiovascular Risk, and All-Cause Mortality

Xin He, Chen Liu, Yili Chen, Jiangui He, and Yugang Dong

Although overweight men without central obesity were more likely to have cardiovascular risk factors and a high 10-year cardiovascular risk, they have better survival than men with normal body mass index and waist circumference.

Serum 25-Hydroxyvitamin D Values and Risk of All-Cause and Cause-Specific Mortality:

A Population-Based Cohort Study,

Daniel V. Dudenkov, Kristin C. Mara, Tanya M. Petterson, Julie A. Maxson, and Tom D. Thacher

White patients with 25(OH)D values of less than 20 ng/mL had higher all-cause mortality than those with values of 20 to 50 ng/mL.

Weren't Asked, Didn't Tell: Prevalence of Communication of Suicidal Ideation in Suicide

Decedents During the Last Year of Life

Tanner J. Bommersbach, Megan M. Chock, Jennifer L. Geske, and J. Michael Bostwick

These findings—that providers did not regularly screen for suicidality, and suicide decedents infrequently endorsed suicidality, even when asked—throw into question the effectiveness of current screening strategies.

739 Fifty-Year Incidence of Waldenström Macroglobulinemia in Olmsted County, Minnesota, From 1961 Through 2010: A Population-Based Study With Complete Case Capture and Hematopathologic Review

Robert A. Kyle, Dirk R. Larson, Ellen D. McPhail, Terry M. Therneau, Angela Dispenzieri, Shaji Kumar, Prashant Kapoor, James R. Cerhan, and S. Vincent Rajkumar

This is the first epidemiological study to evaluate the clinical, laboratory, and pathologic features of Waldenström macroglobulinemia in a specifically prescribed area and time of diagnosis.

Brief Report

747 Administrative Data to Explore the Role of Family History as a Risk Factor for Herpes Zoster Rafael Harpaz and Rebecca M. Dahl

Review

752 Aspiration Pneumonia and Related Syndromes
Augustine S. Lee and Jay H. Ryu

Concise Review for Clinicians—CME Credit Offered

763 Pulmonary Function Tests for the Generalist: A Brief Review Timothy M. Dempsey and Paul D. Scanlon

A Deeper Dive Into the CANTOS "Responders" Sub-Study

The composite cover image highlights 3 salient themes: the wideranging effects of human biomedical research and discovery in driving progress in understanding and treating human disease (symbolized, on the left, by a neuron and its ramifying dendrites and axons); state-of-the-art investigation in evaluating human disease (symbolized, in the middle, by a positron emission tomographic image of the brain); and the indispensability of teamwork and the coalescence of expertise in providing the best possible care for patients (symbolized, on the right, by a collaborating surgical/interventional team).
